Results 1 - 3 of 3 short listing

- 1** Recursive hashing functions for n-grams 100%
 Jonathan D. Cohen
ACM Transactions on Information Systems (TOIS) July 1997
Volume 15 Issue 3
Many indexing, retrieval, and comparison methods are based on counting or cataloguing n-grams in streams of symbols. The fastest method of implementing such operations is through the use of hash tables. Rapid hashing of consecutive n-grams is best done using a recursive hash function, in which the hash value of the current n-gram is driven from the hash value of its predecessor. This article generalizes recursive hash functions found in the ...
- 2** Classification artificial neural systems for genome research 100%
 C. H. Wu , G. M. Whitson , C.-T. Hsiao , C.-F. Huang
Proceedings of the 1992 ACM/IEEE conference on Supercomputing
December 1992
- 3** Technique for automatically correcting words in text 100%
 Karen Kukich
ACM Computing Surveys (CSUR) December 1992
Volume 24 Issue 4
Research aimed at correcting words in text has focused on three progressively more difficult problems: (1) nonword error detection; (2) isolated-word error correction; and (3) context-dependent work correction. In response to the first problem, efficient

pattern-matching and n-gram analysis techniques have been developed for detecting strings that do not appear in a given word list. In response to the second problem, a variety of general and application-specific spelling cor ...
